

EXPERIENCE

Nulogy • Remote

Design Engineer, May 2022 – Present

- Built and maintained a design system used across all organization's products: <https://nulogy.design>
- Created UI prototypes and explorations to push the boundaries of the design system's functionality
- Enhanced developer experience and code quality by adopting TypeScript within the design system
- Drove product development through user-centric design, leading and participating in interview sessions for discovery, concept validation, and usability assessment
- Led the redesign of multiple mobile warehouse experiences, improving efficiency and user satisfaction for forklift operators

Software Developer, July 2021 – May 2022

- Spearheaded effort to migrate six-year old React codebase to TypeScript
- Sped up developers workflow and CI/CD pipeline by reducing Webpack build time by 300%
- Put in place a Storybook based UI test suite using Chromatic

mdf commerce • Longueuil, QC

Software Developer, March 2019 – June 2021

- Created web frontend of 2 supply chain management applications using React & TypeScript
- Built, maintained, and tested highly available, cloud-based, serverless microservices using Node.js and Go capable of processing and storing over a million EDI transactions per day
- Automated tagging and deployment to a CI/CD pipeline by creating a CLI tool
- Load tested the application's architecture by creating transactions provisioning CLI tool
- Provisioned and deployed infrastructure to AWS using Terraform

Front-end Developer, May 2017 – March 2019

- Created responsive and reusable page layouts and components that scale across new supply chain management web applications

Web Developer Intern, February 2017 – May 2017

- Used Jira's REST APIs to create internal tool used by project managers to follow up on projects
